

## Seeburg (E)SPS160 programmer card configuration

The (E)SPS160 uses a diode matrix to set the amount of plays versus the amount of money deposited in the jukebox. 2 configurations are described below. A change of programming requires the addition and/or removal of some diodes. Plain diodes can be used, similar like the 1N4001.

Above configuration is for :

US		NL	
1 dime	- 1 play	1 kwartje	- 1 plaat
2 dimes	- 2 play	2 kwartjes	- 2 platen
1 quarter	- 6 play	1 gulden	- 6 platen
2 quarters	- 14 play	2 gulden	- 14 platen

Above configuration is for :

US:		NL:	
1 dime	- 1 play	1 kwartje	- 1 plaat
2 dimes	- 4 play	2 kwartjes	- 4 platen
1 quarter	- 8 play	1 gulden	- 8 platen
